 - Redux (Toolkit)
 - Node
 - Express
 - MongoDB & MySQL
 - json-web-token
 - Git (GitHub)
 - Jira
- Intermediate
 - TypeScript
 - Passport.js
 - GraphQL
 - Python
 - Django
 - django-rest-framework
 - db architecture
 - SQLite3
 - Postgres
 - Figma
 - Heroku / Heruko CLI
 - Tests
 - Bootstrap
 - OOP
- Global Skills
 - Fast typing
 - Fast learning
 - Problem solving
 - Do Google Search

WORK EXPERIENCES

Full Stack JS Developer

SavvyHill

03/2022 -present

I build fast and quality websites with the requirements requested by the client, usually its MERN stack , with REST or GraphQL depending on how big data we have or will. Create authorization and protected routes only available for sign-in users using JWT. In frontend usually i use React with Redux Toolkit(because I like ExtraReducers provided by Toolkit for async api calls) and MUI or Bootstrap for styles , also I use react-router-dom for navigation

Tools Administrator (Confluence tools support)

SoftConstruct

09 / 2021 - present

I am engaged in process automation in Jira, writing scripts using plugins to complement the capabilities of Jira and automate as many actions as possible, also a create unique workflows for our departments , making approvals systems with group sign off plugins merging with automation , understand rest api, making requests to Jira api's for getting more data, create filters with jql, in docs i do the same with one difference there we have script runner i use that too
